Editor-in-Chief
IEEE TVCG

A previous version of this paper was submitted to InfoVis 2019 (submission ID: 1043). This version was rejected as the paper co-chairs deemed that revising the paper would require more time than allocated to meet reviewer expectations. The paper co-chairs mentioned the following: ``*We particularly encourage such revisions where submissions were positively received by reviewers, but the revisions required were deemed to be beyond the scope of the conference review cycle. If you address the issues raised and subsequently submit to TVCG, please make reference to this InfoVis submission and include a description of how you addressed the InfoVis reviewers' comments*.''

We realize that these extensive changes throughout the paper have increased the paper length. As the TVCG submission guidelines indicate `` *The regular paper page length limit is defined at 12 formatted pages, including references and author biographies. Any pages or fraction thereof exceeding this limit are charged $220 per page. Regular papers may not exceed 18 formatted pages*'', so we have decided to let the paper length stand since our paper is at 16 pages currently — and we would be happy to pay for the extra pages. We would also be happy to reduce length by moving appropriate content from the main body to the supplementary material as suggested by reviewers.
